My first Tableau Dashboard

👤 **Abhinav**   🕐 **October 31, 2023**   📁 **Uncategorized**   🏷 **Analytics**   ✏ **Edit**

I dabbled with Tableau with great enthusiasm and dedication, spending a couple of weeks immersing myself in coursework. However, my drive to solidify my learning and advance my skills led me to dive into practical projects as quickly as possible. My first project revolved around the Covid-19 dataset, which even if I felt was a pretty generic one, made me realise the learning curve once I started with it.

Given its wealth of historical data and numerous precedents to draw inspiration from, I was able to craft a dashboard. I followed an instructive tutorial by Anthony Smoak on YouTube, which offered comprehensive, step-by-step guidance on creating an interactive dashboard to monitor Covid-19 metrics.

Project Public Link:
https://public.tableau.com/views/COVIDTRACKER_16987955915890/Dashboard1?:language=en-US&:display_count=n&:origin=viz_share_link

Dashboard View:

In the spirit of learning, I made a few adjustments to the original tutorial. As a beginner, I opted for simplicity and omitted a few complex charts. You can explore my dashboard via this public link, which, although featuring just a couple of visualizations, signifies the beginning of an exciting journey. Rest assured, I am committed to continually enhancing this chart to extract the most insightful information and present it with the utmost clarity as I keep learning new concepts and apply to it.
